drapilux bioaktiv mouth-nose mask

Reusable mouth-nose masks with antibacterial treatment

Product description

Mouth-nose mask made of textile "made in Germany" with antibacterial finish drapilux bioaktiv. The mouth-nose masks are washable at 60 degrees and reusable. Due to a special bioactive finish of the textile surface, bacteria are attacked and the bacterial infestation is reduced by more than 99 %. The effect is scientifically proven and washable. The textile used is OEKO-Tex Standard 100 certified and meets the human ecological requirements of class I (baby articles) in tests for harmful substances.

Produktdetails

- 100% polyester (2-ply, 150 g/qm)
- OEKO-Tex Standard 100 certified
- drapilux bioaktiv finish reduces bacteria on the textile by more than 99%
- Textiles produced in STeP-certified (Sustainable Textile Production) production in Germany
- With elastic carrying loops
- No medical device or personal protective equipment (PPE)

Material

The mouth-nose mask is made of 100% OEKO-Tex Standard 100 certified polyester and is manufactured in two layers. It is washable at 60°C while retaining the antibacterial effect of drapilux bioaktiv.

General information about mouth-nose masks

A mouth-nose mask is a reusable item of clothing. It is neither a medical device nor personal protective equipment (PPE), and is therefore not intended for use in the health or care sector, as occupational safety or other protective equipment to protect against infections or other harmful substances such as fine dust. The drapilux bioaktiv mouth-nose masks are only intended for private use. A so-called mouth-nose mask can reduce the risk of unnoticed transmission of the corona virus.

Instructions for applying the mouth-nose mask

- Wash hands thoroughly with soap for about 20 seconds according to the recommendations of the Federal Centre for Health Education (<https://www.infektionsschutz.de/haendewaschen/>).
- Take the mask by the loops and place it over the respective ear.
- It is important for the protection of third parties that both mouth and nose are tightly covered by the mask to help reduce the speed of the respiratory flow or droplet ejection e.g. when coughing.
- Even when wearing a mask, the minimum distance of 1.5 metres should be maintained and hand hygiene should not be neglected.

Recommendations for the use of the mouth-nose mask

- Remove or replace the mask if it becomes soaked.
- Store as contamination-proof as possible.
- Wash before use.
- Wash hands (including the corresponding part of the face, if necessary) with soap and/or suitable disinfectant before and after removing or otherwise touching the mask. If the mouth-nose mask is used in any other way despite instructions to the contrary, this is the sole responsibility of the user.

Care instructions

- Normal wash cycle 60°C
- Iron at about 150 degrees (••), do not iron the straps
- Gentle drying
- Do not bleach
